

Estate Management & Water

Estate Managers have a difficult job handling many different specialist topics. Take water as only one of them; which can cover aspects as wide ranging as contaminated land investigation for development proposals; regulatory issues relating to farm management such as Environmental Permits, Agricultural Waste issues, Abstraction Licensing, Private Water Supplies; through to using water to harness renewable energy; not to mention the water related aspects of a planning application covering flood risk, drainage and hydro-ecology.

Why Envireau Water?

We are one of the UK's leading independent consultancies specialising in water resources management and the interaction between water and the environment. Our experience comes from many years assessing, developing and managing water supplies for some of the largest independent water users in the UK. We also have extensive experience of water related issues in the planning arena; flood risk assessment and contaminated land investigation. We have a particular strength in negotiating with the various water related regulators including the Environment Agency and Natural England. Our core staff comprises hydrogeologists, hydrologists, water resource engineers and water treatment specialists all with extensive experience of projects in different industries and sectors, and in particular large Estates.

Which aspects of Estate Management can we help with?

Envireau Water has detailed knowledge of the following topics that are particularly relevant to Estate Management:

- | | |
|----------------|--|
| Commercial | Contaminated land appraisal, independent water supply & borehole evaluation. |
| Property/Rural | Estate water management; Flood risk assessment; Private water supply risk assessment, management, development and rehabilitation; Farm water supply and irrigation management; Winter storage reservoir feasibility & design; Abstraction licensing, trading & renewal; Nitrate sensitive farming and associated regulations; Planning EIA/ES water aspects. |
| Renewables | Groundsource heating/cooling feasibility and design (open loop and closed loop); Energy from lakes & restored quarries/pits; Ground thermal conductivity surveys for underground cable design and wind power / HEP grid connections; HEP hydrology, licensing & consenting; Water aspects of EIA /ES documents. |
