

We Can Help

Water in the agricultural and horticultural sectors is essential, but can be a problem. Solutions must be simple, straightforward and cost effective. Not complicated, drawn out and expensive.

Contact us today to discuss how we can help you to meet your obligations and save you money.

Agriculture, Water and Regulators

Irrigation Water Supply, Regulators, Drainage and Planning

Whether you are planning a new abstraction; renewing an existing licence; submitting a planning application; or dealing with environmental permits and exemptions; you face up to regulators. Operationally you are trying to keep costs to a minimum while meeting licence and permit conditions or trying to get people to listen and understand. It is a tall order for the specialist in farm management, agronomy, land management or planning to also be an expert in water management and regulation.

Why Envireau Water?

We are one of the UK's leading independent consultancies specialising in water management. Our experience comes from many years working in the agricultural and horticultural sectors across the UK.

Our core staff comprises hydrogeologists, hydrologists, water resource engineers and water treatment specialists all with extensive experience of projects in different geographic areas and rock types.

Not heard of us?

We have been working with some major UK growers including Elveden Estate, Langmead Farms, Hall Hunter Partnership and S&A Davies. We have been busy solving the real issues and implementing the relevant solutions. We have been obtaining abstraction licences from closed CAMS water management units. We have been getting planning permissions for polytunnel developments. We have been licensing, consenting and undertaking water resource assessments and flood risk assessments.

Which aspects can we you help with?

Envireau Water has a long and established technical background in the water related issues affecting agriculture and horticulture. We do it and cover it in an appropriate way, at an appropriate cost. We have negotiated the first abstraction licences from closed systems; we pioneered drainage assessments for polytunnels; we submit at least one application to the Environment Agency per month.

We are not land agents, we are not planning consultants. We are water management and regulatory specialists and we know what we are talking about.

Farm managers can spend considerable amounts of time dealing with or worrying about the Environment Agency. We spend most of our time dealing with them, and because we know how they work and we know our subject, we find a way through. If it's a water related issue we can help and if we can't, we'll tell you who can!
