

We Can Help

Water in and around quarries whether in planning or operation can be a problem. The solution should be simple, straightforward and cost effective. Not complicated, drawn out and expensive.

Contact us today to discuss how we can help you to meet your obligations and save money.

Quarrying, Water and Regulators

Planning, Operations, Regulators

Whether you are planning a new quarry; extending an existing quarry; submitting a ROMP; or dealing with discharge consents (permits), abstraction licences, or mine waste regulations, you face up to regulators. Operationally you are trying to keep costs to a minimum while meeting permit and licence conditions. It is a tall order for the specialist in planning, operations or a quarry manager to also be an expert in water management and regulation.

Why Envireau Water?

We are one of the UK's leading independent consultancies specialising in water management. Our experience comes from many years working in the quarrying and mining industries across the UK and worldwide.

Our core staff comprises hydrogeologists, hydrologists, water resource engineers and water treatment specialists all with extensive experience of projects in different geographic areas and rock types.

Not heard of us?

We have been quietly working with Aggregate Industries, Hanson, and Cemex. Planning consultants like WYG Planning and SLR have used us on projects like the Bardon Hill Extension, Criggion and Penrhyn. We have been busy solving the real issues and implementing the relevant solutions.

Which aspects can we you help with?

Envireau Water has a long and established technical background in the water related issues affecting quarrying. Whether it be drainage, control and discharge; dewatering; hydrogeology and assessment of impacts; or flood risk assessment. We do it and cover it in an appropriate way, at an appropriate cost.

We are not planning consultants, we are not geotechnical engineers. We are water management and regulatory specialists and we know what we are talking about.

Quarry operators can spend considerable amounts of time dealing with or worrying about the Environment Agency. We spend most of our time dealing with them, and because we know how they work and we know our subject, we find a way through. We have negotiated the first 'two tier' discharge consents in England; we have prepared Environmental Statements that have not been queried; we submit at least one application to the Environment Agency per month.

If it's a water related issue at any stage of a project we can help and if we can't we'll tell you who can!
